

SkyLine Tower door cover replacement

Applies to Control Tower as well

Step 1 – Look for the clip on the bottom of the door. On the horizontal seam atop the clip, use a fingernail or thin blade and pull out and down.

Step 2 – Remove the clip by continuing to pull downward from the tower. It should release fairly easily.

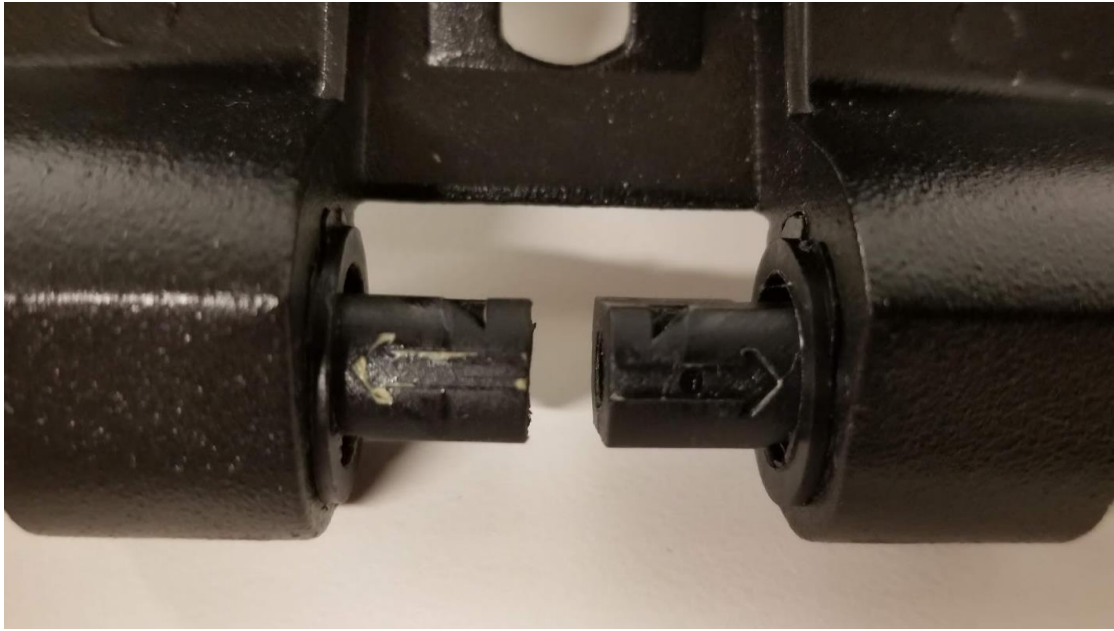

Step 3 – Open the door all the way

Step 4 – Pull straight out on the door. It will release from the little retractable tabs in the tower. Be sure not to move those tabs and ensure they remain lined up on the same plain.

Step 5 – Install new door by pressing the door over the tabs. Simply the reverse of how you took the door off.

Step 6 – Close the door and put the bottom clip back on. Use your thumb to press it into place. You should hear a click when it is fully installed.

Step 7 – Open and close the door of the tower to ensure proper function. The clip should stay in place with no gaps and the tabs should push outward when the door is closed and retract inward when the door is open.
